
MEMPHIS, TENN., TUESDAY MORNING, JUNE 15, 1971

C.A.

THE LAST SPAN — The big arms of steel which will support the new Mississippi River bridge join with the bridge's piers and some

river weeds to frame the Downtown Memphis skyline. The last span of metal that will join the bridge's piers was swung into place last week and work will soon begin on the suspen-

sion portions that will link the remaining piers. Completion of the bridge is scheduled for late 1972.
